- 1988 Sectio, blood transfusions
- 1992 ligation of Fallopian ducts, at preoperative screening anti-HCV pos
- 1994 referral to outpat. clinic, almost normal transaminases, no treatment
- 1997 ALT 165

Lab. results 1/1997

- AST 77 IU/ml (normal: -15*)
- ALT 107 IU/ml(normal: -19*)
- Gamma-GT 269 IU/ml (normal: -18*)
- Alk.Phosphatase: 128 IU/ml
- pCHE: 5,39 kU/ml
- Bilirubin, coagulation, CBC: normal

- Caeruloplasmin, Ferritin: normal
- HCV PCR pos
- ANA 1:640 pos, ASMA 1:320 pos, anti ssDNA 22,5
- HLA: A2,24; B13,15; Cw3,w6;DR4,7

Liver biopsy 1997

 Chronic Hepatitis (Typ C) :portal und lobular grade 2, Fibrosis grade 2 according Ludwig).

- Which treatment?
- 1997?
- 2015?

- 5 MU IntronA/every other day
- nonresponder, treatment stopped after week 12
- One month later, test treatment with steroids, no response
- No further treatment, out patient controls, mildly increased transaminases
- 1999 ALT increased again

Liver biopsy 1999

 Chronic hepatitis C; inflammatory activity: portal and lobular 3, fibrosis 3 according Ludwig.

- What to do now?
- 1999?
- 2015?

- Repeated treatment with 25 mg Prednisolon/d, no improvement
- 5/99-11/99: treatment with MU IntronA/ every other day +Ribavirin 800
- Develops hypothyreosis
- Nonresponder

Liver biopsy 2004

- Chronic Hepatitis (Typ C) inflammatory activity: portal grade 3, lobular grade 2, Fibrosis grade 4 according Ludwig, minimale Steatose (5%)
- Metavir Score: A=2, F=4.

KE, weibl. Geb. 1956, Biologin

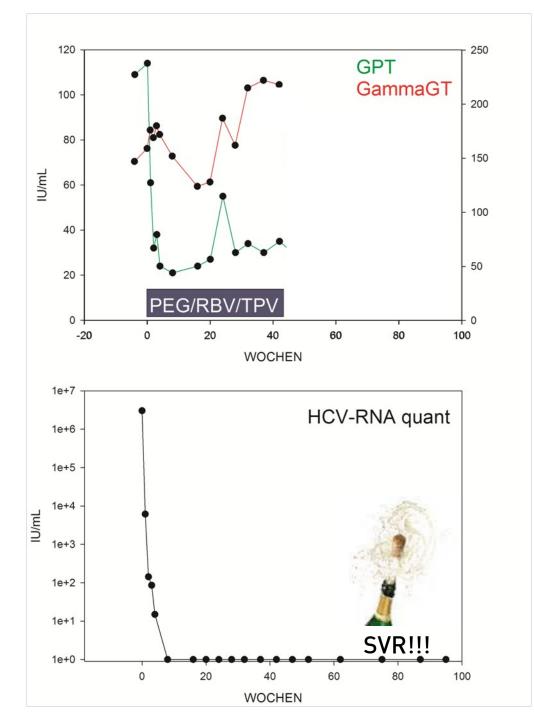

- Was nun?
- 2004?
- 2014?

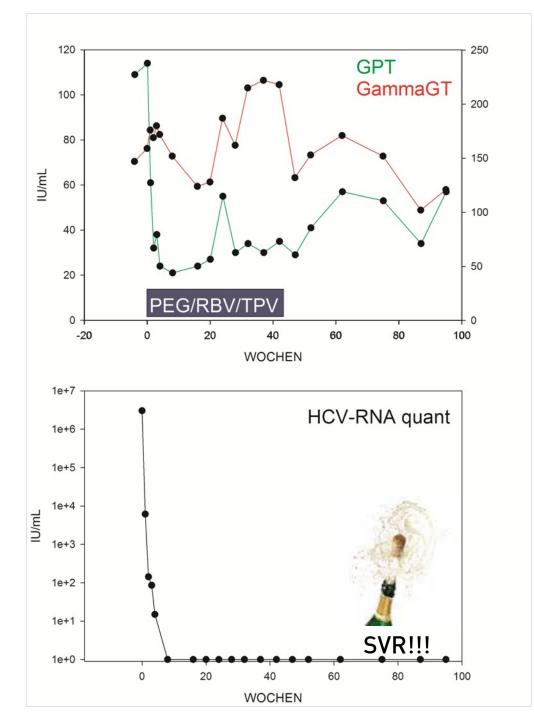

- 5/2004 Peginterferon alfa 2a+ Ribavirin
- PCR baseline 641.000 IU/ml
- Week 4: 174.000 IU/ml
- Week 8: 149.000 IU/ml
- Week 12: 75.200 IU/ml
- Treatment terminated

- on Ursodesoxycholic acid stable low ALT
- 2007, general tiredness, Spider naevi, Hepatosplenomegaly,
- 2009 dry eyest ophtalmologist: Sicca Syndrome
- 2009 joint pains
- 8/2009 oral Lichen ruber planus, eating very painful, Local therapy with tacrolimus

- What to do now?
- 2012?
- 2015?

- 9/2012 treatment with Peginterferon alfa2a+Ribavirin+Telaprevir
- Tolerates treatment very poorly, needs several blood transfusions (despite of lowering the dose of ribavirin)
- Stops treament after week 42

- Steroids (given for 5 weeks) ineffective
- Patient feels well, no complaints

• What do do now?
